

Top 3 benefits of a Data Fabric

By 2023, organizations using Data Fabrics to connect, optimize and automate data management processes dynamically will reduce time to integrated data delivery by 30%.¹

In the current world that we live in, data is more dispersed, dynamic, diverse, and challenging to manage than ever before. Enterprises must juggle complex multivendor data environments, siloed data sets, and lengthy data preparation cycles—all while maintaining a secure and compliant data governance strategy. A Data Fabric architecture provides a connective tissue between data endpoints—enabling the full breadth of data management capabilities, including integration, discovery, governance, curation, and orchestration. With Data Fabric, your organization can:

1 Enable self-service data consumption and collaboration

Self-service capabilities enable pertinent data users within organizations to find quality data quicker and spend more time exploring data to provide tangible insights that drive value for the business.

86% - 158%
Increased ROI²

Automate governance, data protection, and security enabled by active metadata

2

€20M or 4% of turnover
Potential GDPR non-compliance fines³

AI-enhanced automation creates data governance rules and definitions by automatically extracting content from regulatory documents. Enterprises can implement revised or new governance regulations with speed and precision, potentially averting costly fines for non-compliance.

3 Automate data engineering tasks and augment data integration

The real-time continuous and automatic analysis supports the delivery of quality data. Optimize and accelerate data delivery within the enterprise, eliminating inefficient, repetitive, and manual data integration processes.

25% - 65%
reduction in ETL requests²
